

Engineering and Design Solutions

Earth Day

Engineering and Design Solutions - Solar Circuit Workshop

All working lanterns will be sent to developing countries like Haiti, the Dominican Republic, the Philippines and Mexico

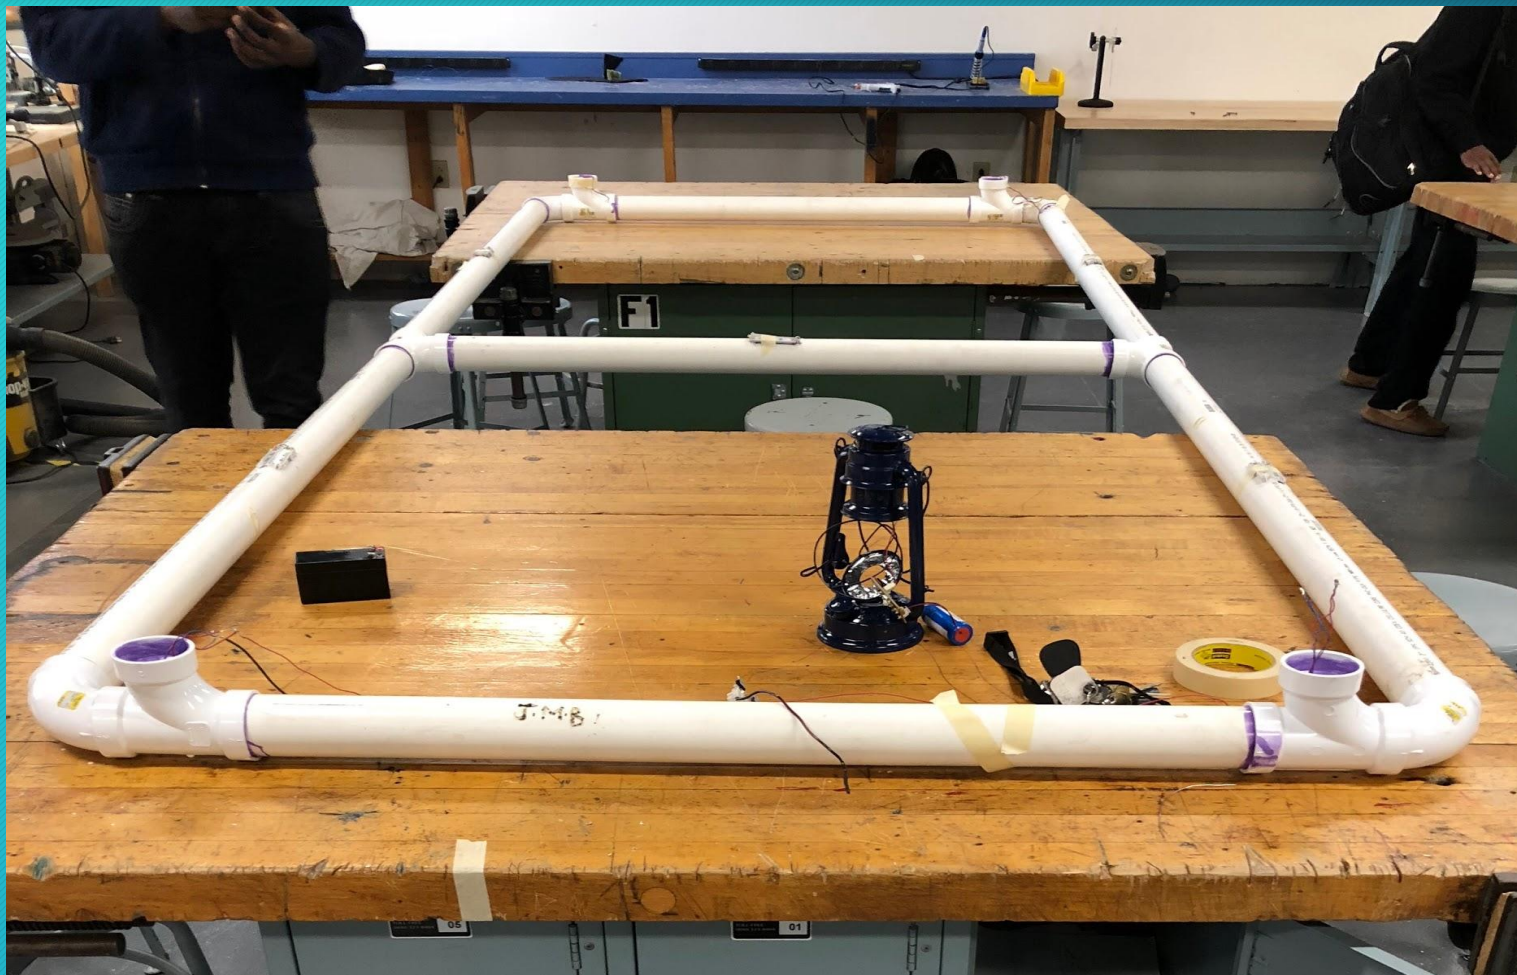

Liter of Light founder Illac Diaz was present to walk students through the process and discuss the program

It is a goal of the program to not only equip people in the United States to help construct circuitry and lanterns, but to provide business opportunities in the countries where the technology is most needed—especially for women.

Solar Light Bus Shelter (in progress)

Students Wiring the LED Lights
